- JavaScript, jQuery
- Ajax
- Perl, ASP, VBScript

#### Databases:

- MySQL, SQLite
- PostgreSQL
- MongoDB
- MS Access

#### APIs:

- REST/JSON/XML
- Google (Maps, Analytics, OAuth, G+)
- YouTube, Vimeo
- Facebook, Twitter
- Amazon, Authorize
- Calendars, Weather

#### Open Source:

- WordPress, Drupal
- Joomla
- PrestaShop
- oscommerce

#### Other Related:

- OOD/OOP
- Version Control (GIT / SVN)
- MVC, RSS, Regex
- Photoshop, Illustrator, PSP

#### In-Depth Training:

- Python Django, Flask, Tkinter (competent)
- NodeJS, Express, React (MERN Stack) (semi-competent)
- Java, ColdFusion, Flash, Android

### Summary Profile

---

Full-Stack Web Developer, System Designer and Manager with proven abilities to transform concepts and ideas into full-scale applications. Participated in and managed development of responsive, secure, database-driven applications from technical, business and usability (UI) perspectives. Personally I'm honest, ethical, flexible, reliable and a team player.

### Professional Experience

---

#### eNET Innovations, Inc. – Cary, NC

##### *Founder / Full-Stack Developer / Manager* – (1998 to Present)

- Developed, implemented and maintained a vast array of websites for a diverse local and out-of-state client base.
- Designed, optimized and implemented numerous SQL/Relational databases.
- Designed and developed custom Content Management Systems (CMS), along with theme and plug-in development, modifications and implementations of open-source CMS packages.
- Worked closely with Advertising Agencies to provide the development for their designs. This included back-end admin panels as well as front-end HTML, CSS, JS and database integration.
- Established relationships with Web Development and Consulting companies to both assist their current development staff with projects as well as handling complete projects from conceptualization through implementation.
- Designed, developed and implemented custom back-end Administration Panels.
- Converted websites from ColdFusion and ASP to PHP.
- Moved websites between various hosting providers, including web pages, content and MySQL databases.
- Converted .PSD files into pixel-perfect front-end pages rendering properly in multiple browsers.
- Developed and implemented aggregators, mash-ups, interfaces and APIs to specific client specifications.
- Worked closely with SEO companies to optimize client websites for top search placement.
- Worked on various private, password-protected and intranet sites.
- Worked with clients in formulating estimates and writing project proposals.
- Performed miscellaneous activities requested by a wide range of clients such as:
  - Finishing websites after the client's web developer quit.
  - Tracking down and fixing bugs no one was able to fix.
  - Incorporating plug-ins and functionality such as calendars, maps, contact forms, photo galleries and more.
  - Installing and configuring WordPress, Drupal and other open-source packages.
  - Implementing website changes, enhancements and tweaks as needed and requested.

## Professional Experience (Continued)

---

### eNET Innovations, Inc. — A Few Selected Accomplishments:

- Developed an intranet for a company to calculate and display volumes of trading data for their clients around the world in a comprehensive, selectable format. This intranet saved my client hundreds of hours and thousands of dollars monthly, while providing the data in a summarized, more timely fashion, in turn saving their clients a significant amount of time and money.
- Developed an auto-sign-up feature for a major insurance broker that allowed agents to create their own sales and recruiting websites while at the same time creating all the records necessary to support automated billing for those sites. This turned a stagnant IT cost center into a profit center generating over \$250,000 per year.
- With language assistance from the site owner converted an English-language website to Spanish. This entailed conversion of graphics and navigation as well as content.
- Developed a common and scalable Administrative Area for Real Estate Agent websites allowing agents to tie into the database and maintain their own Real Estate listings with very little cost and effort. The Admin Area was so easy to use and self-directing that virtually NO training nor user manual was required for implementation.
- Participated in the design, development and implementation of a 2-Way API, where each side served as both the Requester and the Responder.

## Additional Experience

---

Prior to eNET Innovations, attained significant additional experience in Information Technology, including Consulting, Project and Team Management, Sales/Marketing and Senior Management. Firms worked for included CPi / modis, SysCon Group, Consultants in Data Processing and Systemation.

## Select Soft Skills

---

- Communicating with both technical and non-technical personnel
- Managing projects from conceptualization through implementation
- Managing both internal and external team members
- Leading teams in conversions from/to different hardware/software platforms
- Working remotely --and-- working with remote clients and teams from all points in North America (North Carolina to California, Florida to Western Canada) spanning multiple time zones
- Extreme proficiency in digging in and quickly learning and understanding new (and legacy) applications, which has proven extremely valuable for debugging, enhancements and problem solving.
- Excellent writing ability, with expertise and experience in developing website content, proposals, documentation, user manuals, design specifications and more
- Video expertise in both shooting and editing (many wedding videos under my belt)

## Training Certificates

---

- Complete Python Masterclass
- Complete Python Masterclass: Python From Scratch
- Projects in Python for Intermediate: Build Python Projects
- Ultimate Guide to Django
- Node.js, Express, Mongo - Dev to Deployment
- Plus 20 more to include Mobile Phone Apps, Java Programming, Java Beginners, Java Intermediate, XML, Networking, CCNA and Web Multimedia Training
